Lee Doughty
Curriculum Vitae

Introduction

I am a recent graduate from the graphic design course at Brighton University. Whilst on this course, I began to learn how to code during my second year, when I took a module on HTML. I began to dive into coding and continued to explore CSS and JavaScript from tutorials online, collaborating with friends on projects, and attending Coding meetups, developing my skills with advice and tutorials from professionals. I apply creative problem solving skills in my approach to work, and have a strong eye for detail which I have developed from my background in design.

Projects

incahootsbrighton.com. Working collaboratively with various teams including branding, curation, and social media. We created a website advertising and displaying the work of students on the graphic design and illustration course at the University of Brighton. This involved regularly presenting and communicating our ideas to the various teams involved, developing our work from feedback, organising roles and managing time with scheduled deadlines.

nodulesofflint.com. I worked with a coursemate on this website to create a documentation and celebration of individual rocks from Brighton beach. We applied our skills in design to create a beautiful, clear display of the images with a focus on user-navigation. We developed this project by applying new techniques we have been learning such as CSS Grid to create cross-platform layouts to display these artifacts, and skills in JavaScript to create a random display on each refresh and a unique arrangement of rocks for each viewer.

Volunteering

September — Present:

Codebar coach: Codebar is designed to help people learn to programme in a collaborative environment. I began to help teaching HTML, CSS, and JavaScript, mentoring students fundamental programming concepts and helping them on personal projects.

Education

2015 — 2018 : BA (Hons) Graphic Design at University of Brighton.
2014 — 2015 : Japanese advanced course at School of African and Oriental Studies (University of London).
2013 — 2014 : Foundation Diploma at Central Saint Martins (UAL), (Merit).
2011 — 2013 : BTEC Diploma in Graphic Design at Havering College, (Distinction, Distinction, Merit).

Skills

Using HTML, CSS, and JavaScript for developing websites.
Using a content management system in making Wordpress sites.
Creative coding, such as using interactive SVGs in the browser, and working with JavaScript libraries such as p5.js and three.js.
Some skills with back-end development, using Node.js to create a Twitter bot.
Proficient in using version control with Git in the command line.
Proficient in the Adobe Suite and Microsoft Office Suite.
Currently developing a website with React.

Interests

I have a passion for linguistics and culture. This led me to begin teaching myself Japanese around the age of 14 with the help of friends and with resources online and developing conversation Japanese skills. The process of teaching myself a language has helped me to expand my understanding of other cultures and has become a big influence in my work and approach to learning.
